

[220] Files

Meena Syamkumar
Mike Doescher

Relation to Recent Topics...

file objects are a type of iterator (lecture 25)

exceptions occur a lot with files (lecture 26)
not found, out of space, no permissions, etc

Learning Objectives Today

Basic file interactions

- opening/closing
- reading/writing

OS module

- `listdir`, `mkdir`, `exists`, `isdir`, `isfile`, `join`

File exceptions

Encodings

Learning Objectives Today

Basic file interactions

- opening/closing
- reading/writing

OS module

- `listdir`, `mkdir`, `exists`, `isdir`, `isfile`, `join`

File exceptions

Encodings

File objects

```
f = open(path)
# read data from f
# OR
# write data to f

f.close()
```

built-in open function

file object

file path

The diagram illustrates the use of the built-in `open` function to create a file object. A red arrow points from the text "built-in open function" to the opening parenthesis of the `open` call. Another red arrow points from "file object" to the variable `f`, and a third red arrow points from "file path" to the argument `path`.

File objects

main.py:

```
f = open(path)
```

```
# read data from f  
# OR  
# write data to f
```

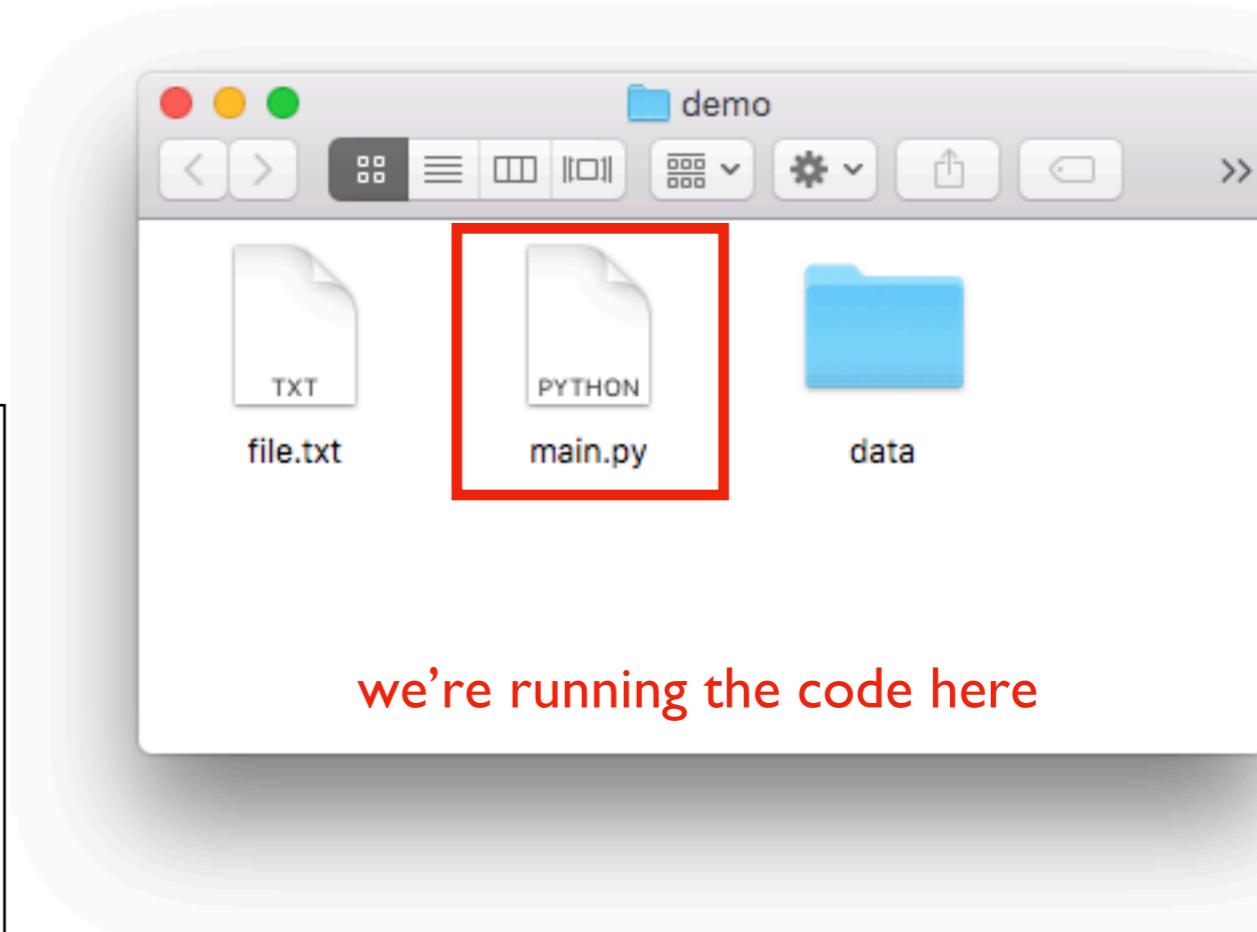

```
f.close()
```

built-in open function

file object

file path

we're running the code here

File objects

main.py:

```
f = open("file.txt")
```

```
# read data from f  
# OR  
# write data to f
```

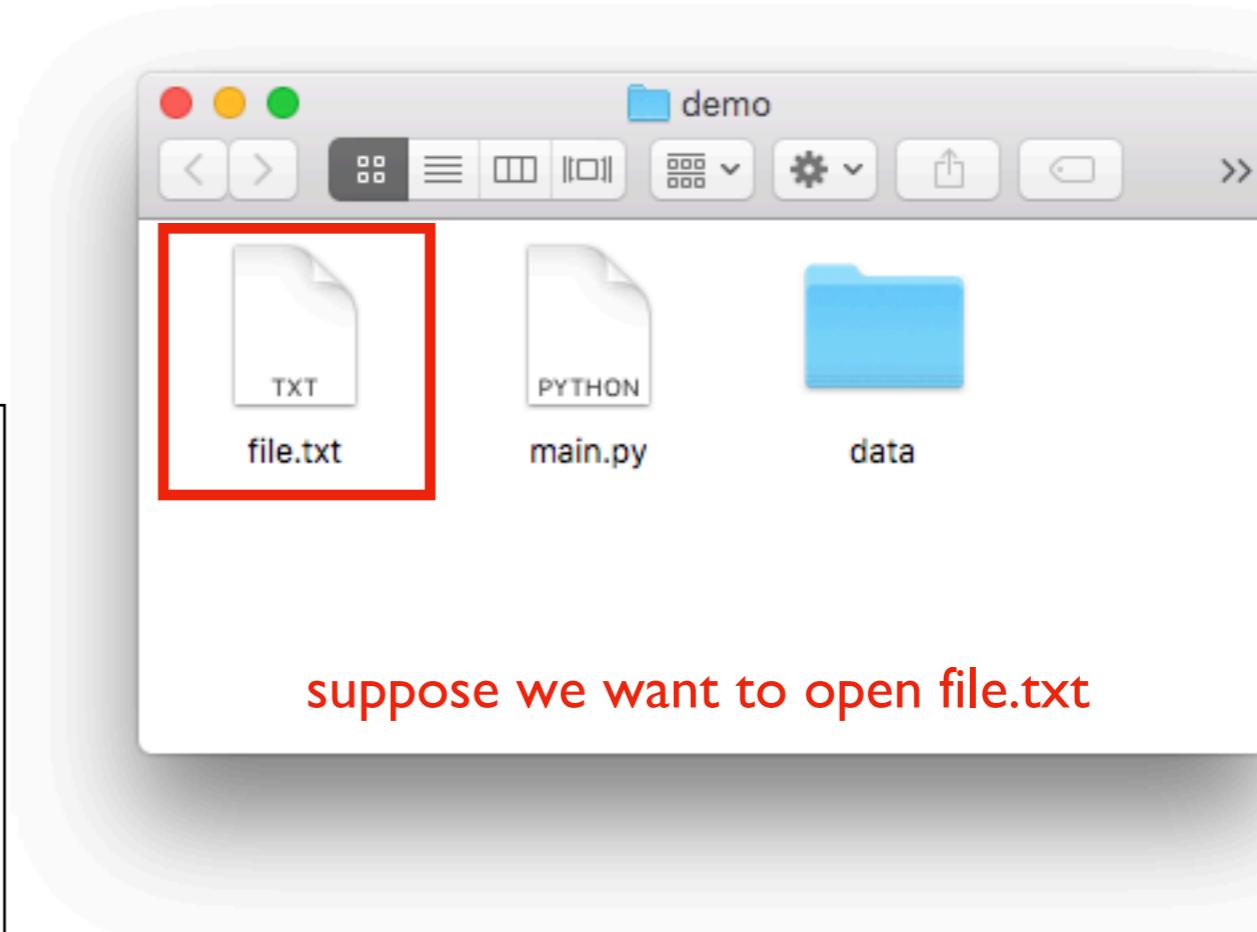

```
f.close()
```

built-in open function

file object

file path

suppose we want to open file.txt

File objects

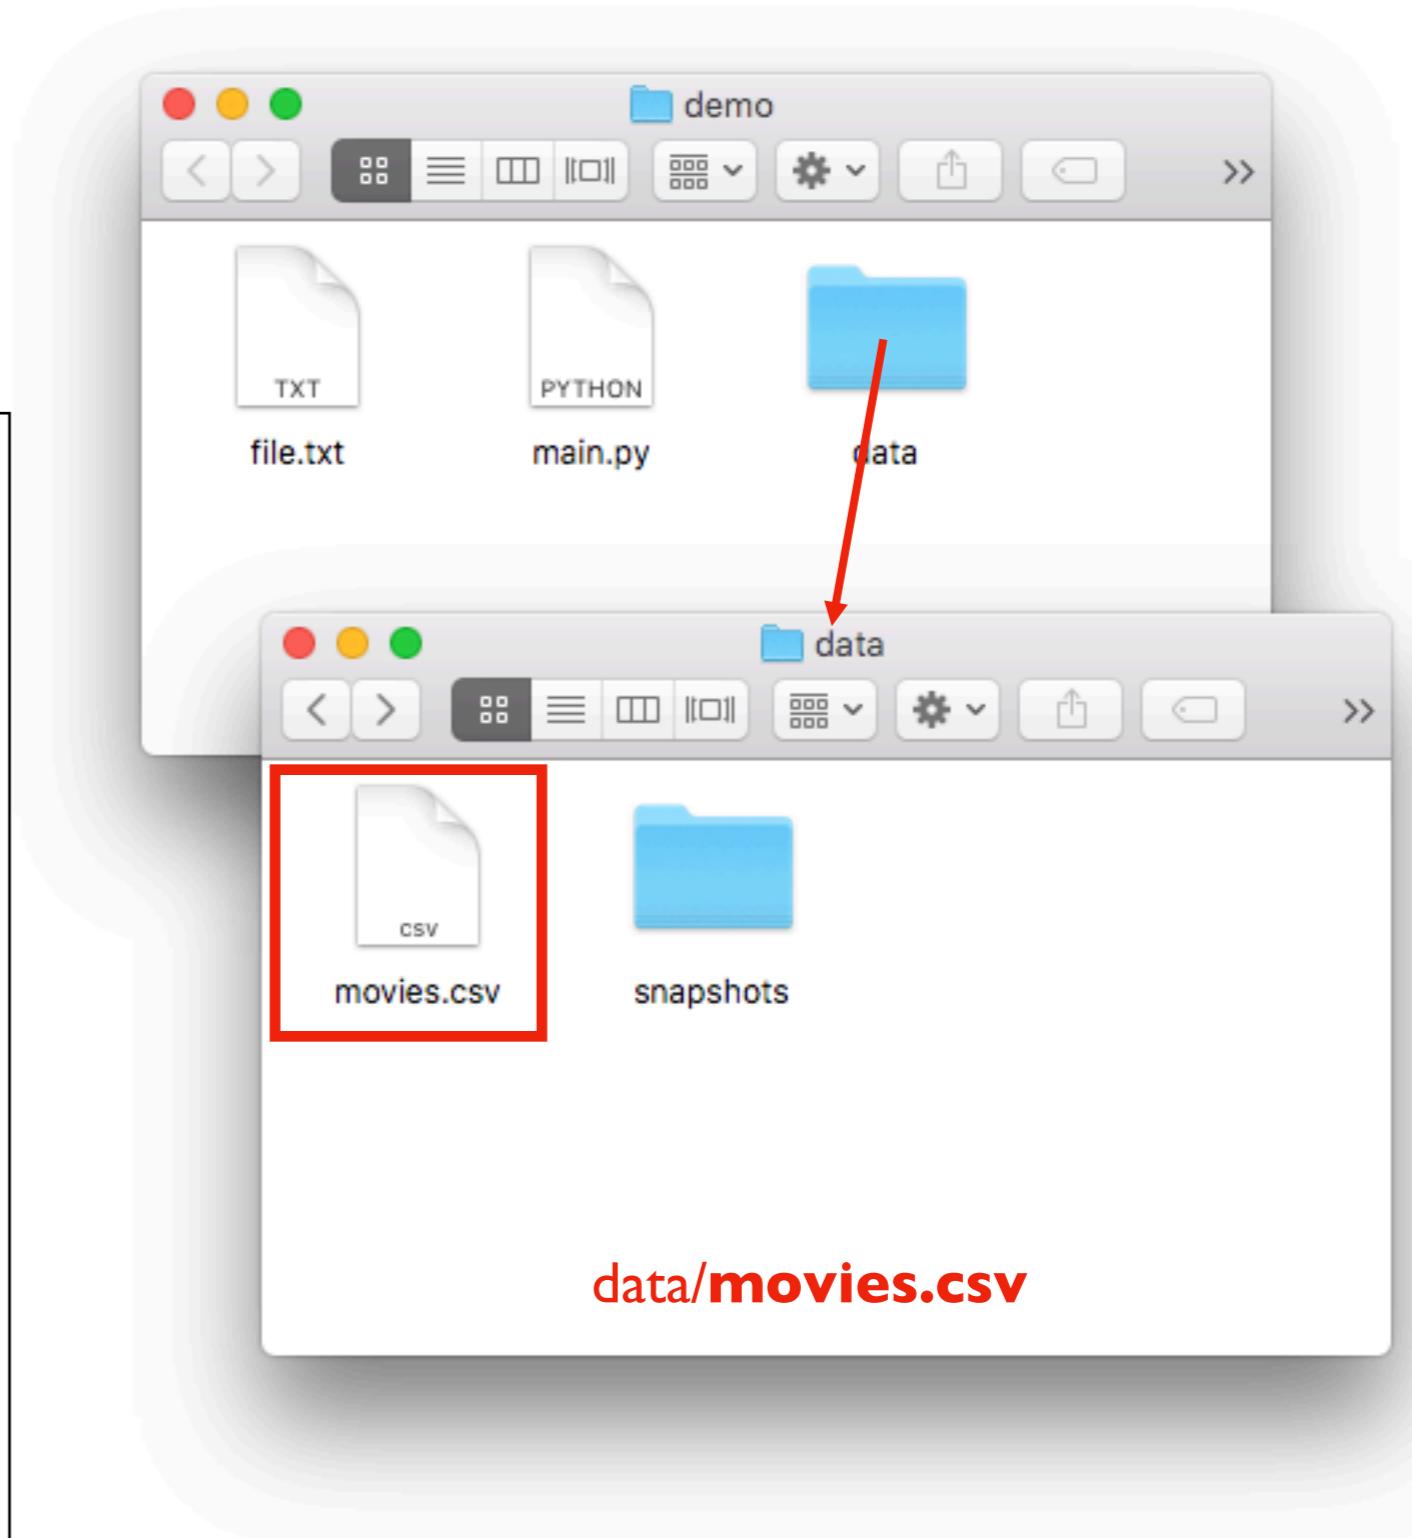

main.py:

```
f = open(  
    "data/movies.csv")  
  
# read data from f  
# OR  
# write data to f  
  
f.close()
```

built-in open function

file object

file path

File objects

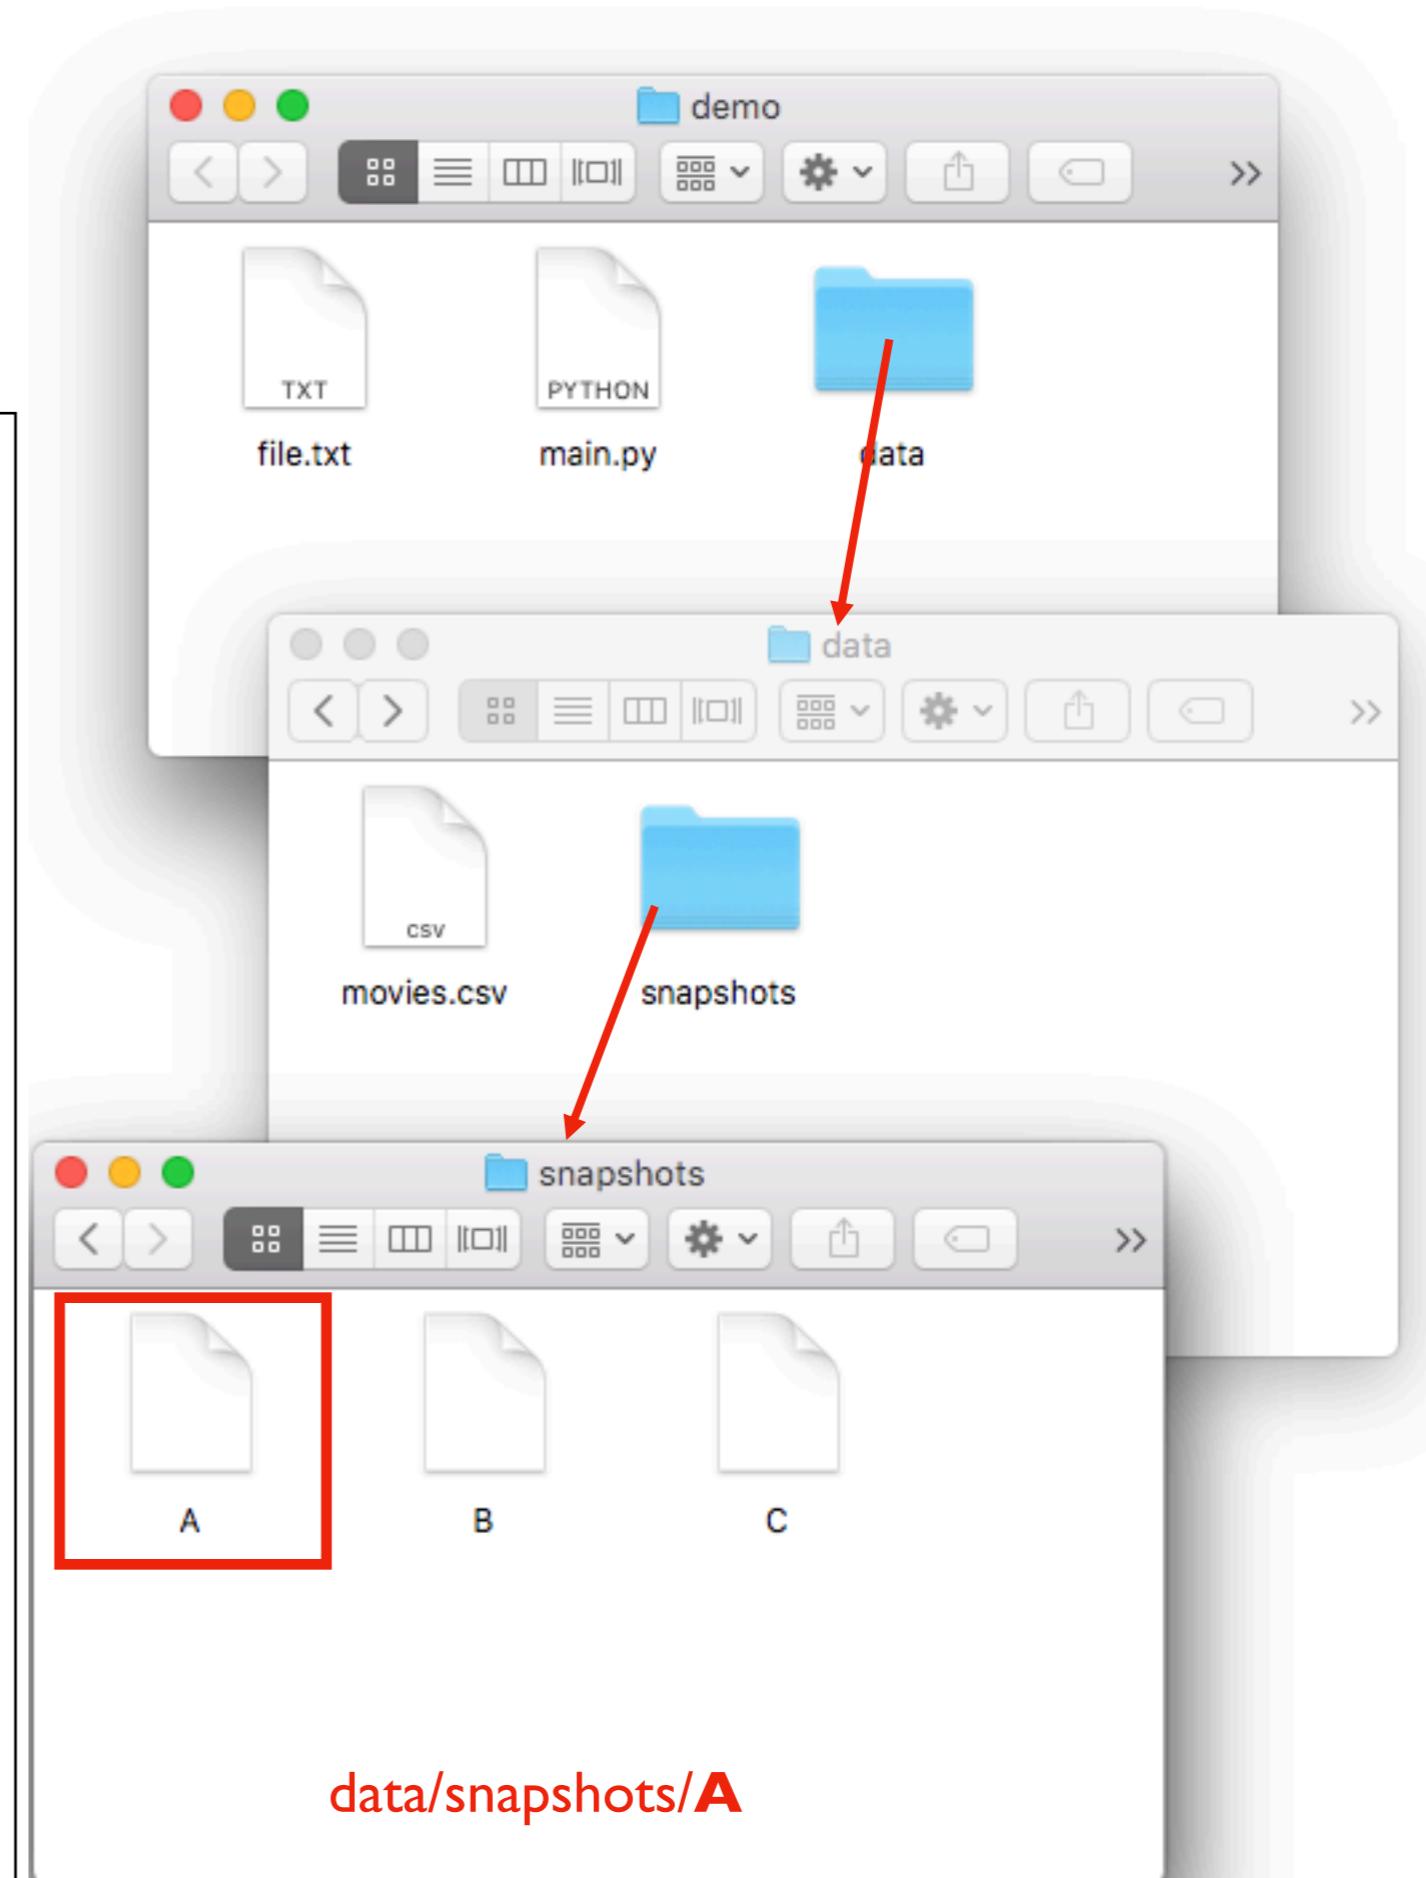

main.py:

```
f = open(  
    "data/snapshots/A")  
  
# read data from f  
# OR  
# write data to f  
  
f.close()
```

built-in open function

file object

file path

File objects

main.py:

```
f = open("file.txt")
```

```
# read data from f
```

```
# OR
```

```
# write data to f
```

```
f.close()
```

File objects

main.py:

```
f = open("file.txt")
```

```
# read data from f  
# OR  
# write data to f
```

```
f.close()
```

using file

File objects

imagine a *file object* as a *sandwich*...

main.py:

```
f = open("file.txt")
```

```
# read data from f  
# OR  
# write data to f
```

```
f.close()
```

f = open(...)

use file

f.close()

using file

Reasons for closing

- avoid data loss
- limited number of open files

cleanup

Learning Objectives Today

Basic file interactions

- opening/closing
- reading/writing

OS module

- listdir, mkdir, exists, isdir, isfile, join

File exceptions

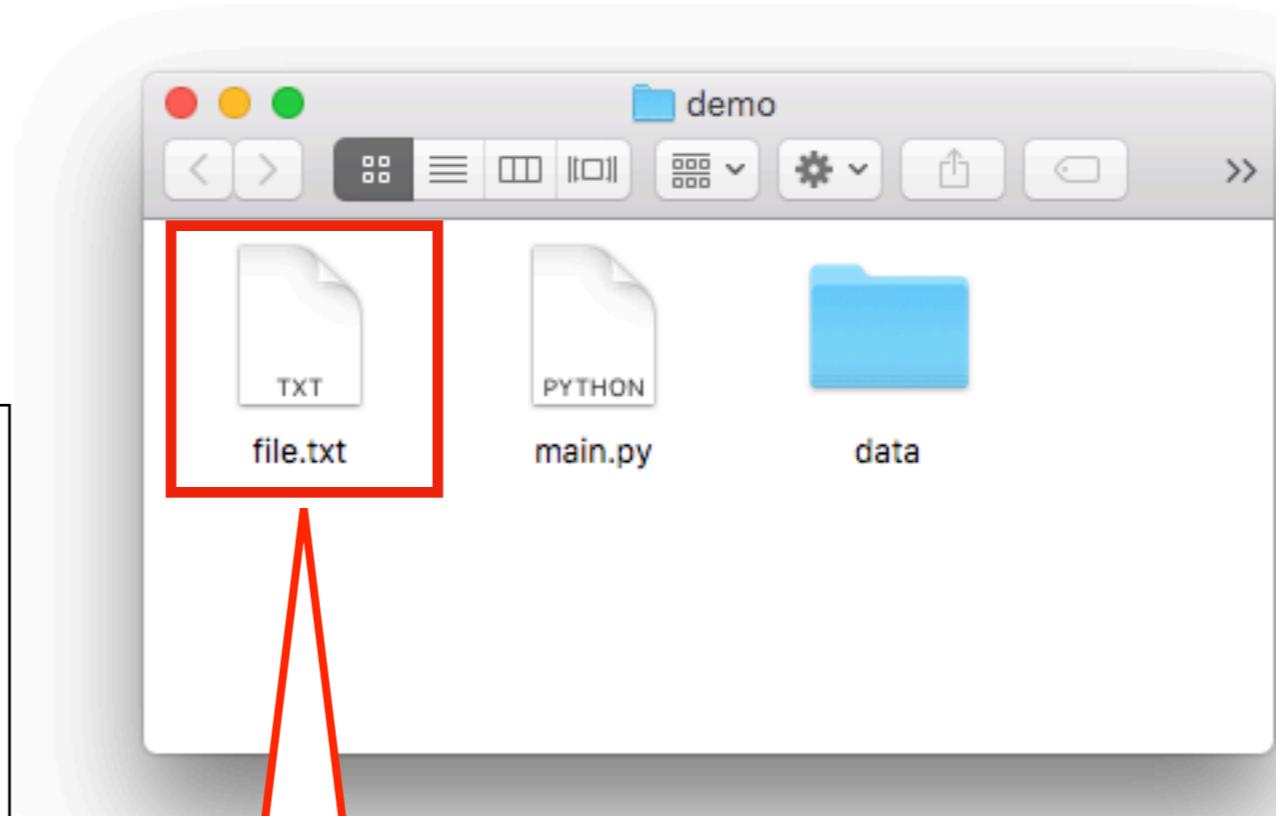

Encodings

Reading a file

```
f = open("file.txt")
```

```
# read data from f  
# OR  
# write data to f
```

```
f.close()
```

I promise
to always
close my files

Reading a file

```
f = open("file.txt")
```

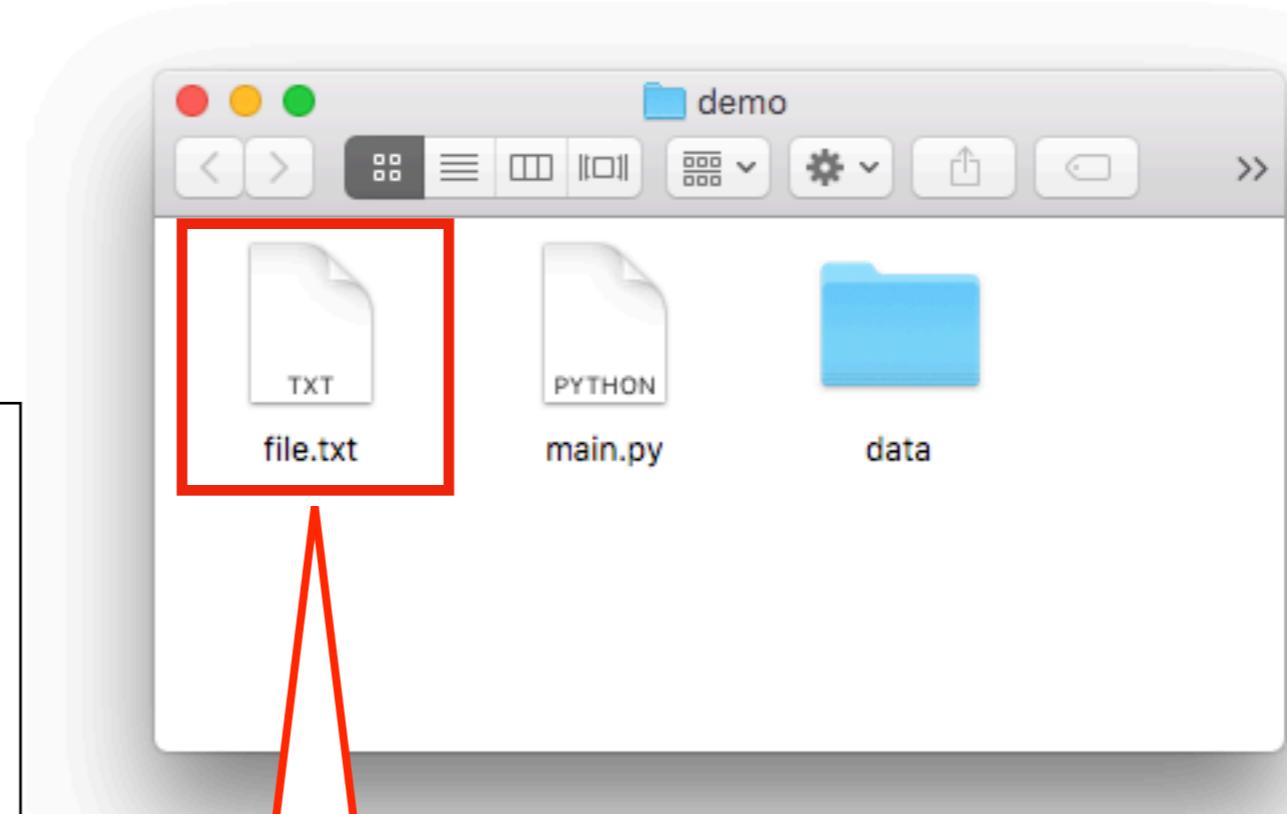

```
data = f.read()
```

Option I

```
print(data)
```

data is: "I promise\n to always\n close my files"

```
f.close()
```

I promise
to always
close my files

read() method

- fetch entire file contents
- return as a string

Reading a file

```
f = open("file.txt")
```

```
# read data from f
# OR
# write data to f
```

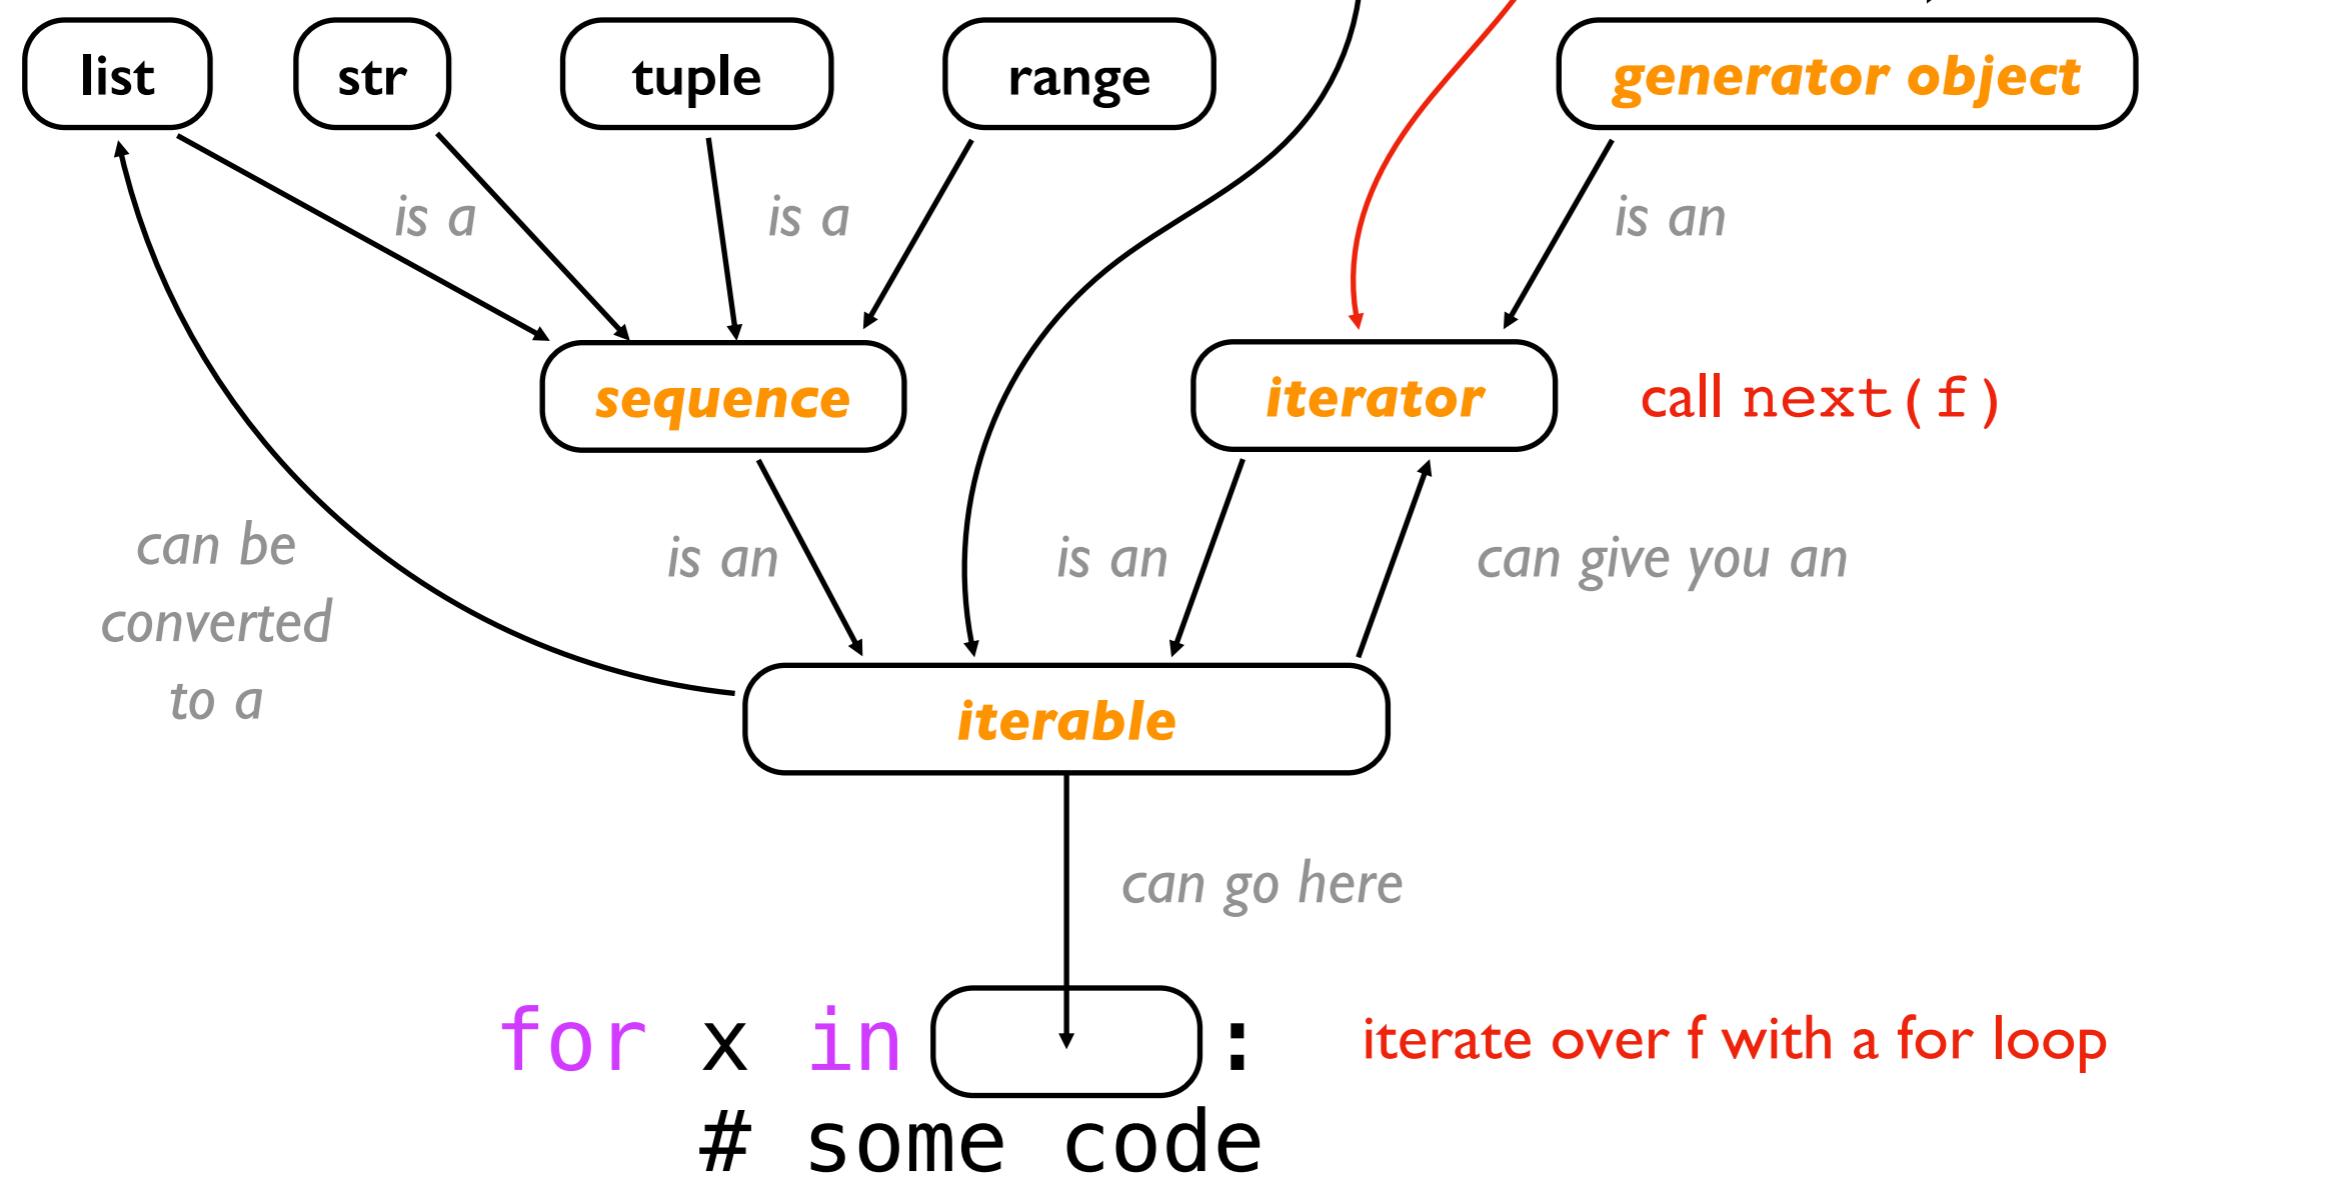

Option 2

```
f.close()
```

file objects are iterators!

The Vocabulary of Iteration

convert it
to a list

The Vocabulary of Iteration

convert it
to a list

```
f = open("file.txt")  
lines = list(f)  
f.close()
```

list

str

tuple

range

sequence

can be
converted
to a

iterable

is an

is a

is an

iterator

can give you an

```
f = open("file.txt")  
for l in f:  
    print(l)  
f.close()
```

file object

yield keyword

contains a

generator function

returns a

generator object

```
f = open("file.txt")  
first = next(f)  
f.close()
```

call next(f)

for x in : iterate over f with a for loop
some code

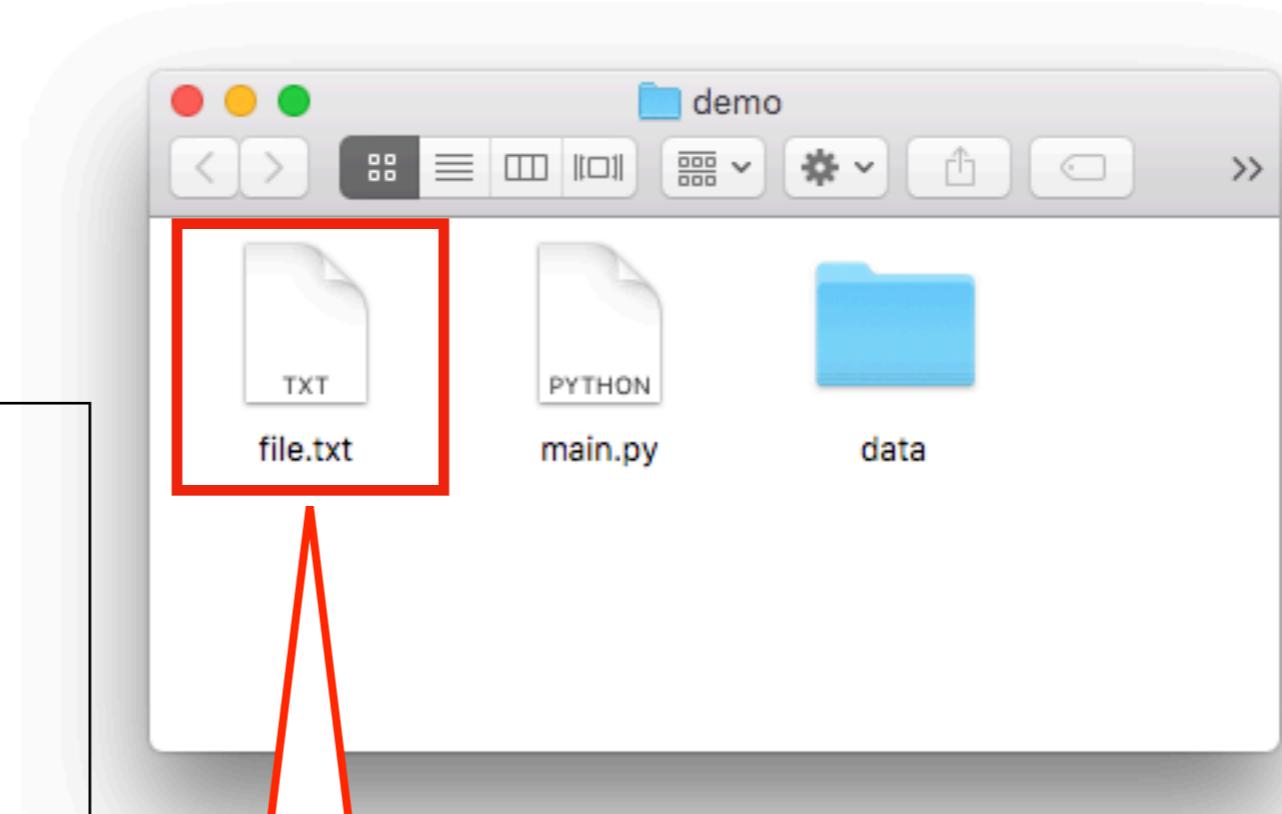

Write a file

```
f = open("file.txt")
```

```
# read data from f  
# OR  
# write data to f
```

```
f.close()
```

I promise
to always
close my files

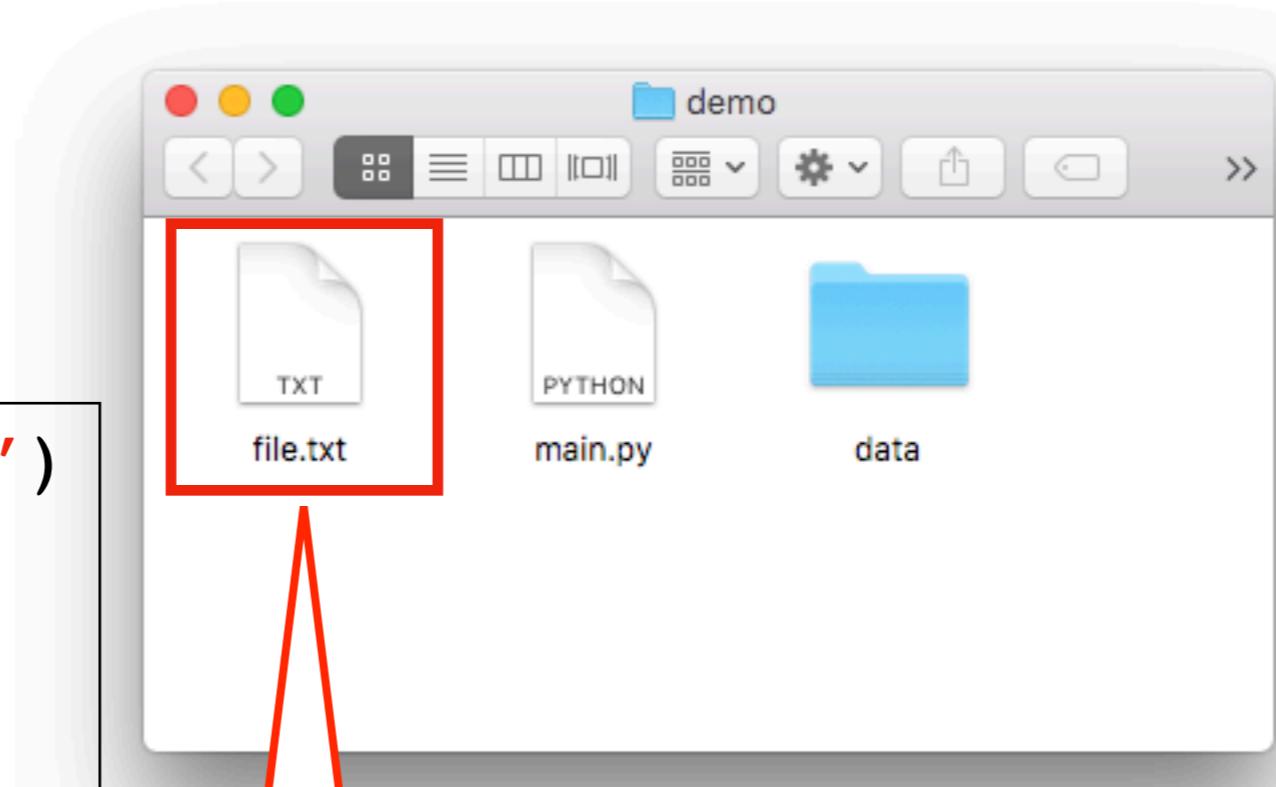

Write a file

“w” mode indicates we want to write to this file

```
f = open("file.txt", "w")
```

```
# read data from f  
# OR  
# write data to f
```

```
f.close()
```

I promise
to always
close my files

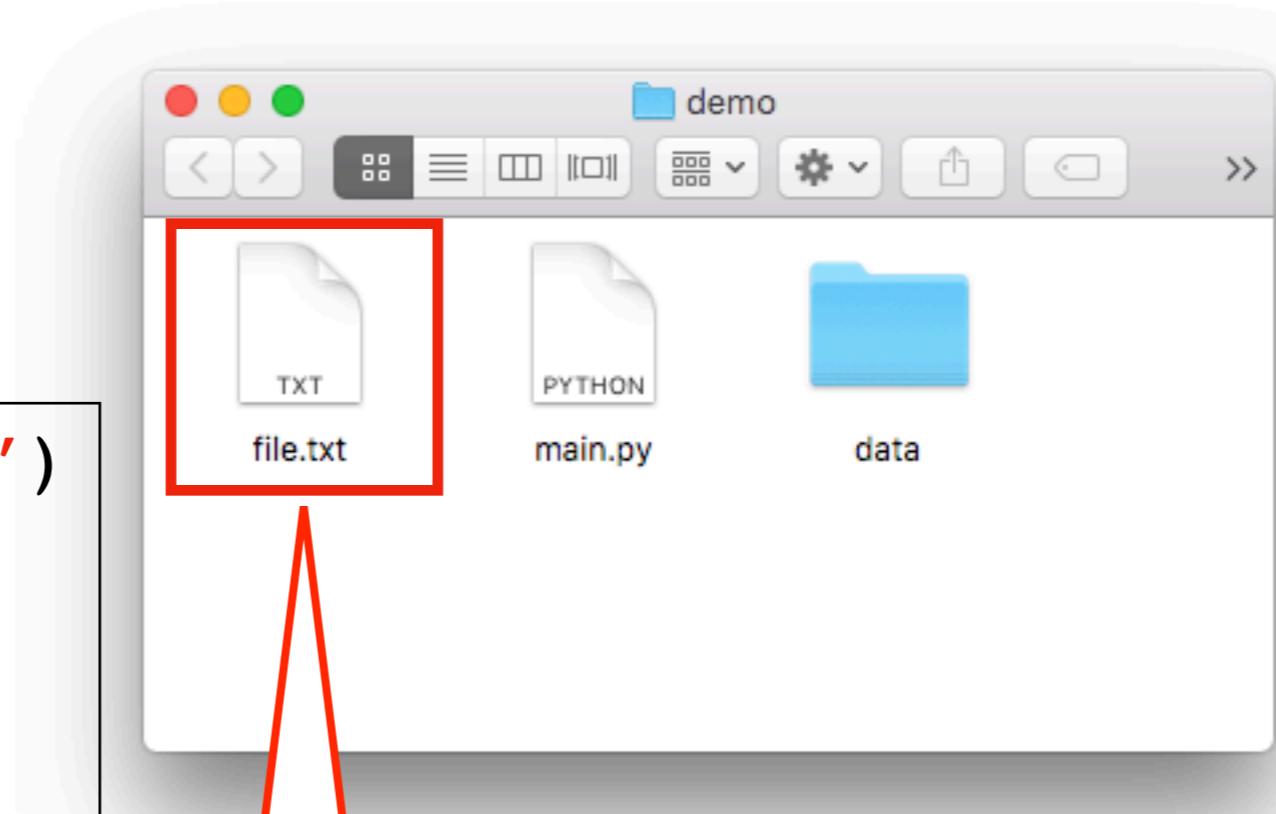

Write a file

“w” mode indicates we want to write to this file

```
f = open("file.txt", "w")
```

```
f.write("hello")
f.write(" world\n")
f.write("!!!!\n")
```

```
f.close()
```

let's run it!

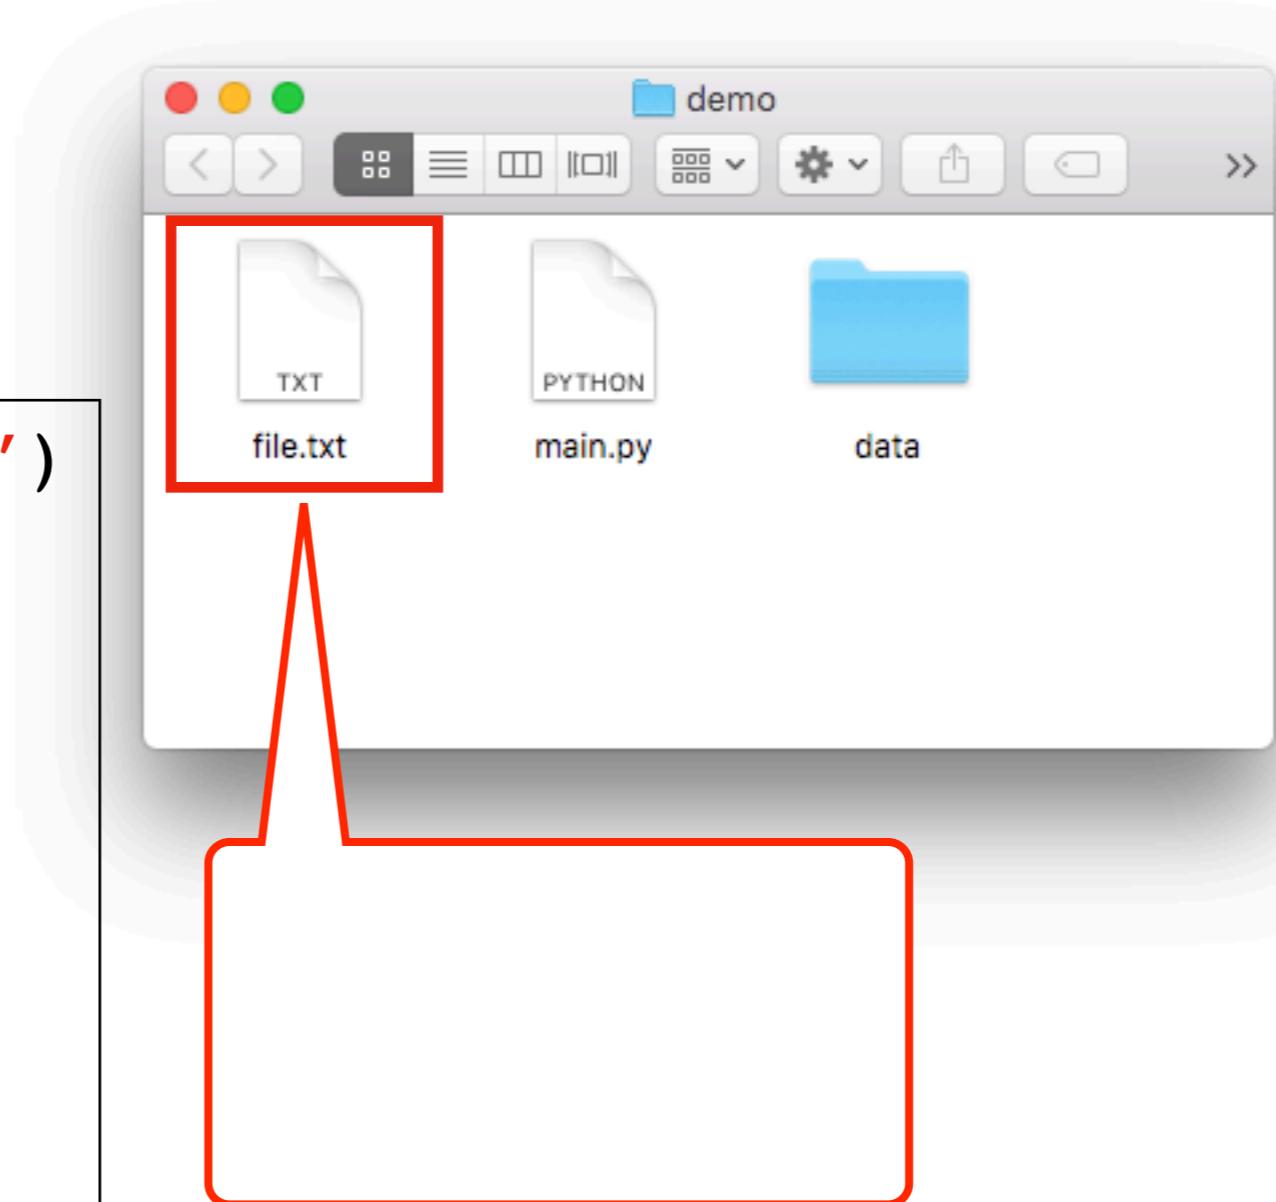

Write a file

“w” mode indicates we want to write to this file

```
f = open("file.txt", "w")
```

```
f.write("hello")
f.write(" world\n")
f.write("!!!!\n")
```

```
f.close()
```

opening with “w” is dangerous. It immediately wipes out your file.

(or creates a new one if there isn’t already a file.txt)

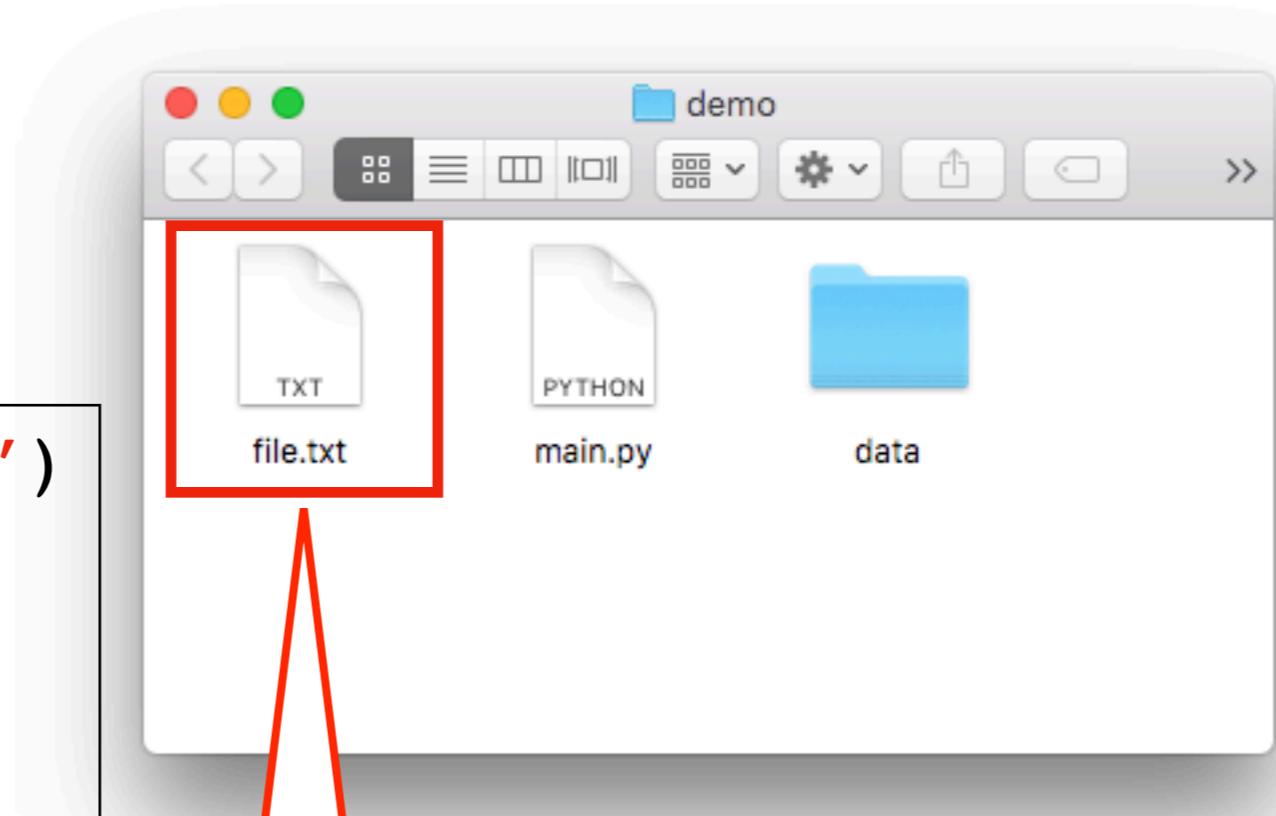

Write a file

“w” mode indicates we want to write to this file

```
f = open("file.txt", "w")
```

```
f.write("hello")
f.write(" world\n")
f.write("!!!!\n")
```

```
f.close()
```

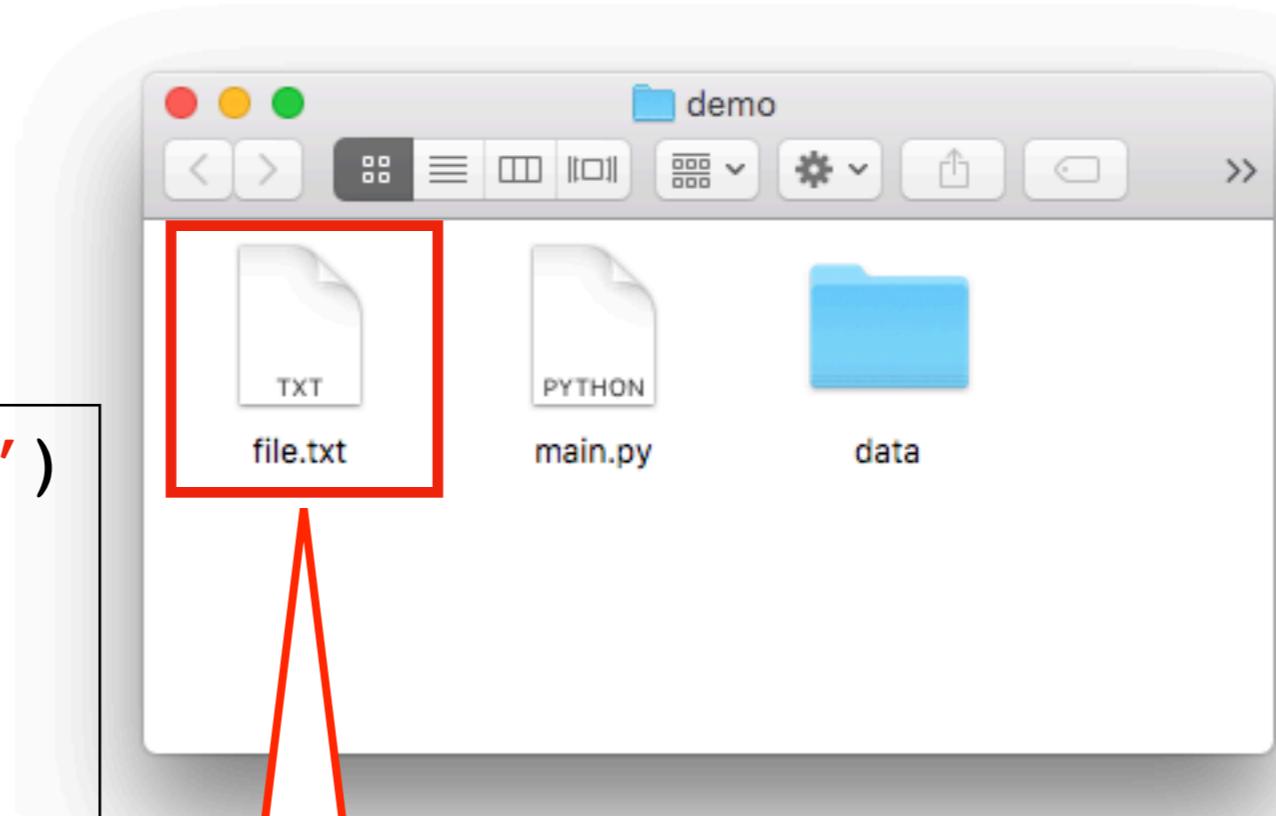

Write a file

“w” mode indicates we want to write to this file

```
f = open("file.txt", "w")
```

```
f.write("hello")
f.write(" world\n")
f.write("!!!!\n")
```

```
f.close()
```

hello world

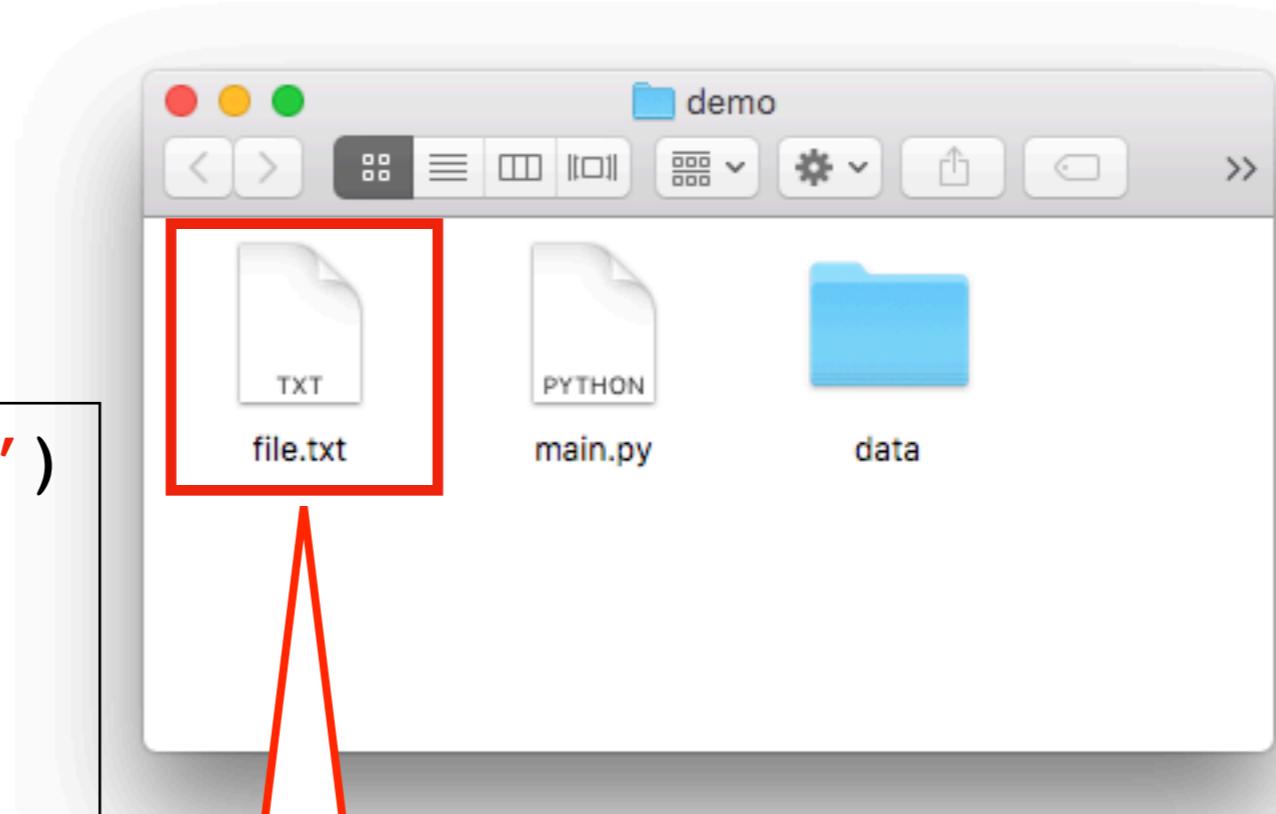

Write a file

“w” mode indicates we want to write to this file

```
f = open("file.txt", "w")
```

```
f.write("hello")
f.write(" world\n")
f.write("!!!!\n")
```

```
f.close()
```

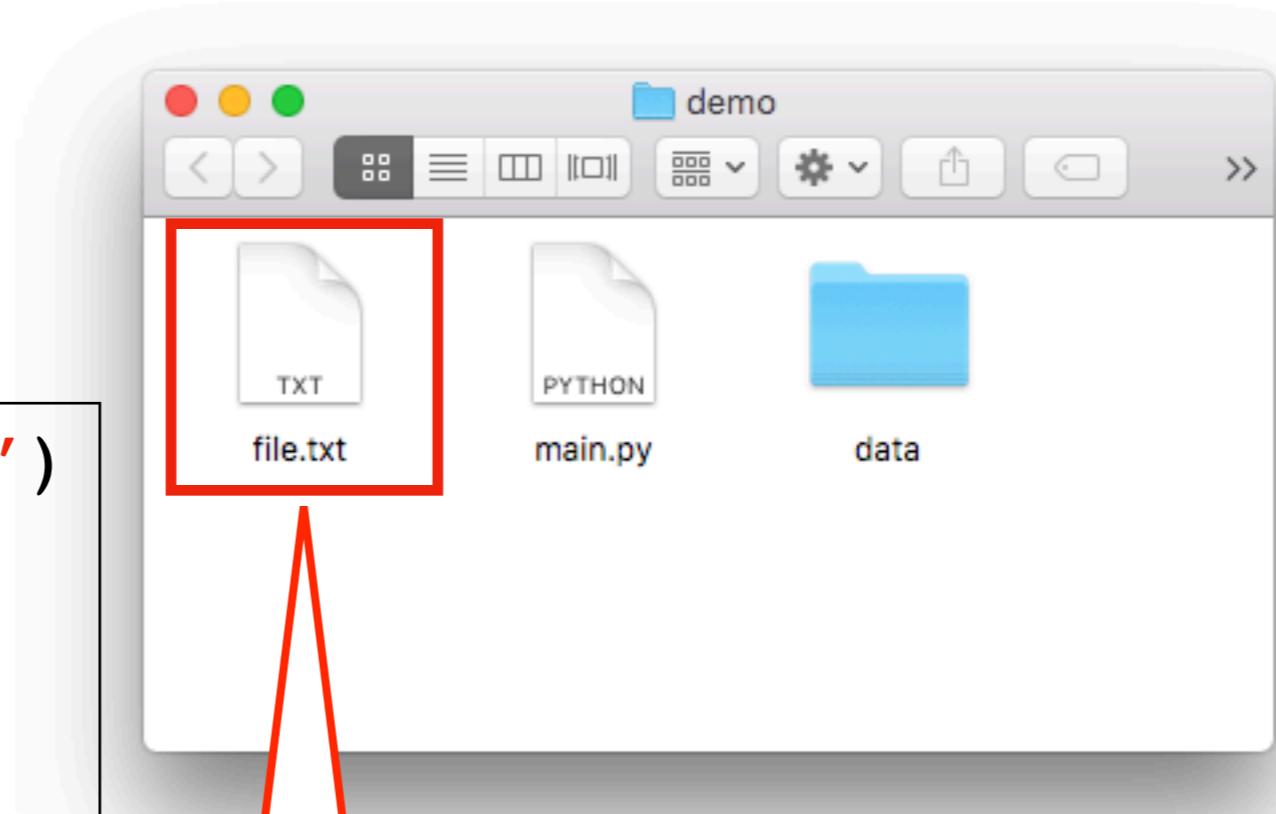

Write a file

“w” mode indicates we want to write to this file

```
f = open("file.txt", "w")
```

```
f.write("hello")
f.write(" world\n")
f.write("!!!!\n")
```

```
f.close()
```

be careful with newlines
(write doesn't add them like print does)

Learning Objectives Today

Basic file interactions

- opening/closing
- reading/writing

OS module

- `listdir`, `mkdir`, `exists`, `isdir`, `isfile`, `join`

File exceptions

Encodings

OS Module (Operating System)

Many functions in `os` and `os.path` for working w/ files

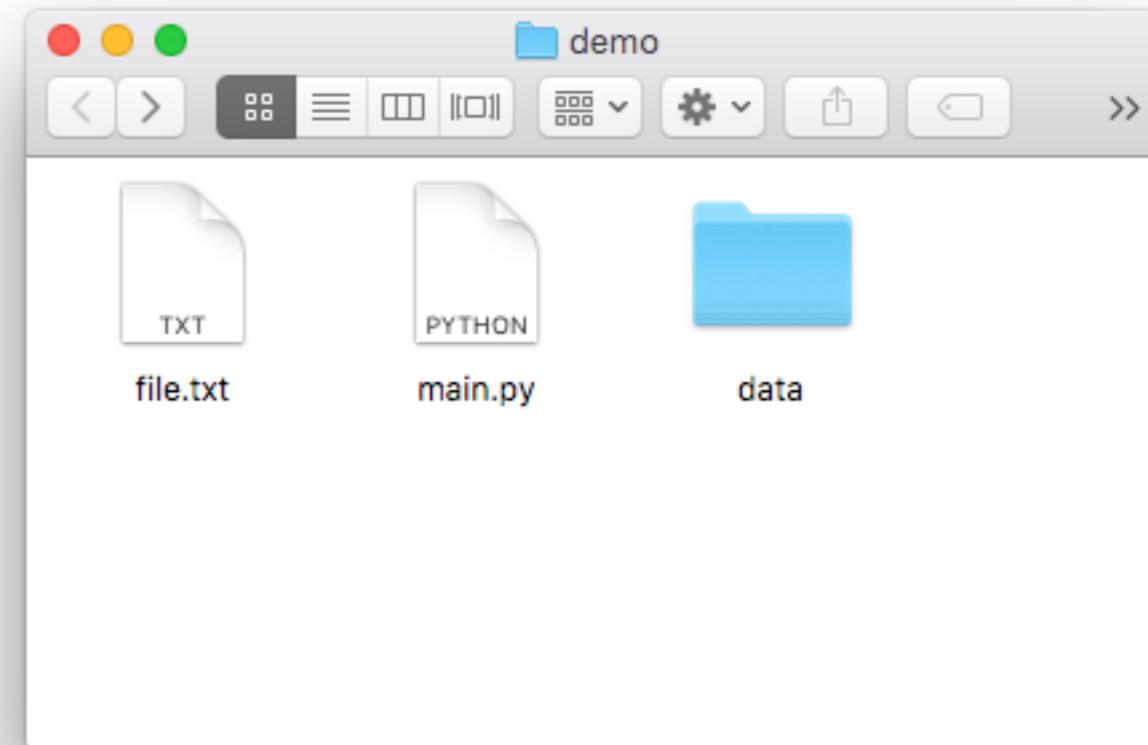

- `os.listdir`
- `os.mkdir`
- `os.path.exists`
- `os.path.isfile`
- `os.path.isdir`
- `os.path.join`

OS Module (Operating System)

Many functions in os and os.path for working w/ files

- **os.listdir**
- os.mkdir
- os.path.exists
- os.path.isfile
- os.path.isdir
- os.path.join

```
>>> import os  
>>> os.listdir(".")  
["file.txt", "main.py", "data"]
```

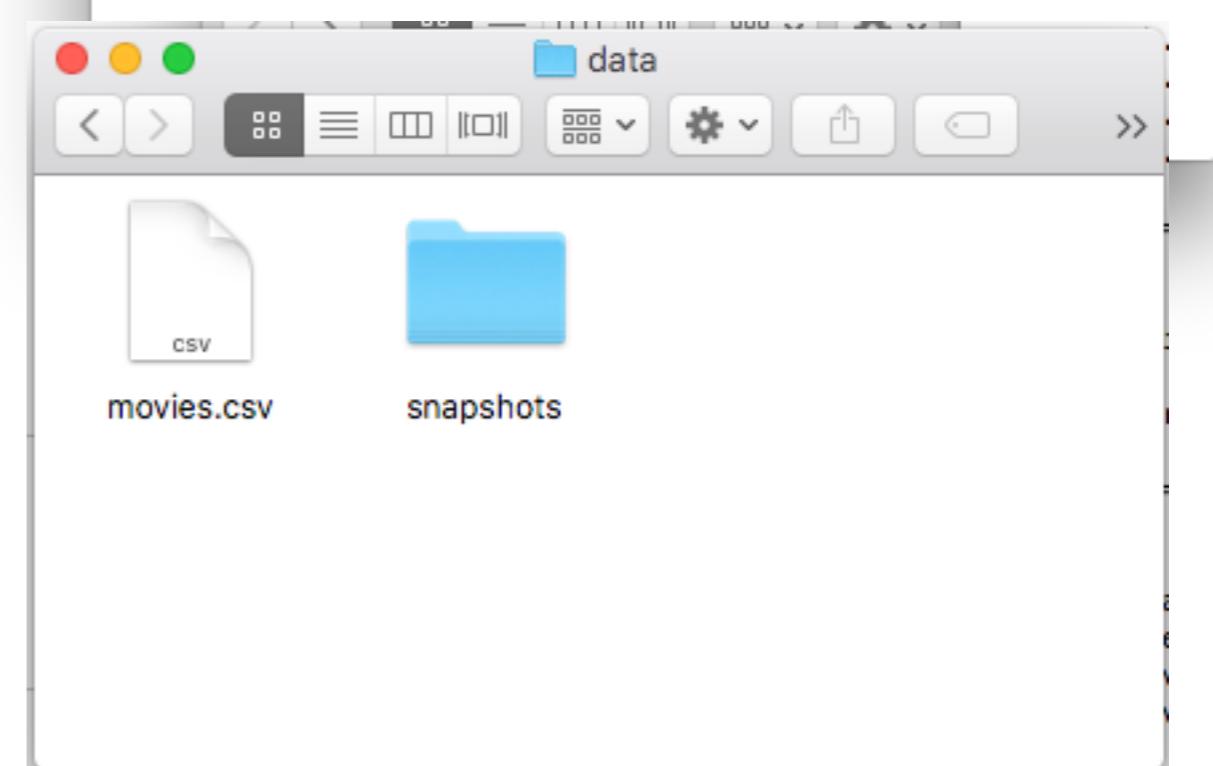

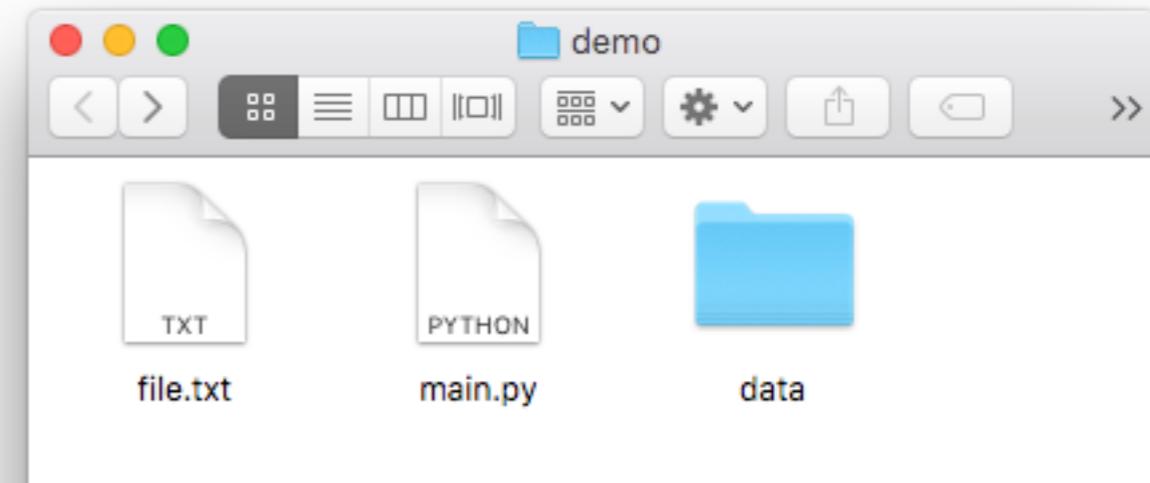

OS Module (Operating System)

Many functions in os and os.path for working w/ files

- **os.listdir**
- os.mkdir
- os.path.exists
- os.path.isfile
- os.path.isdir
- os.path.join

```
>>> import os  
>>> os.listdir("data")  
["movies.csv", "snapshots"]
```

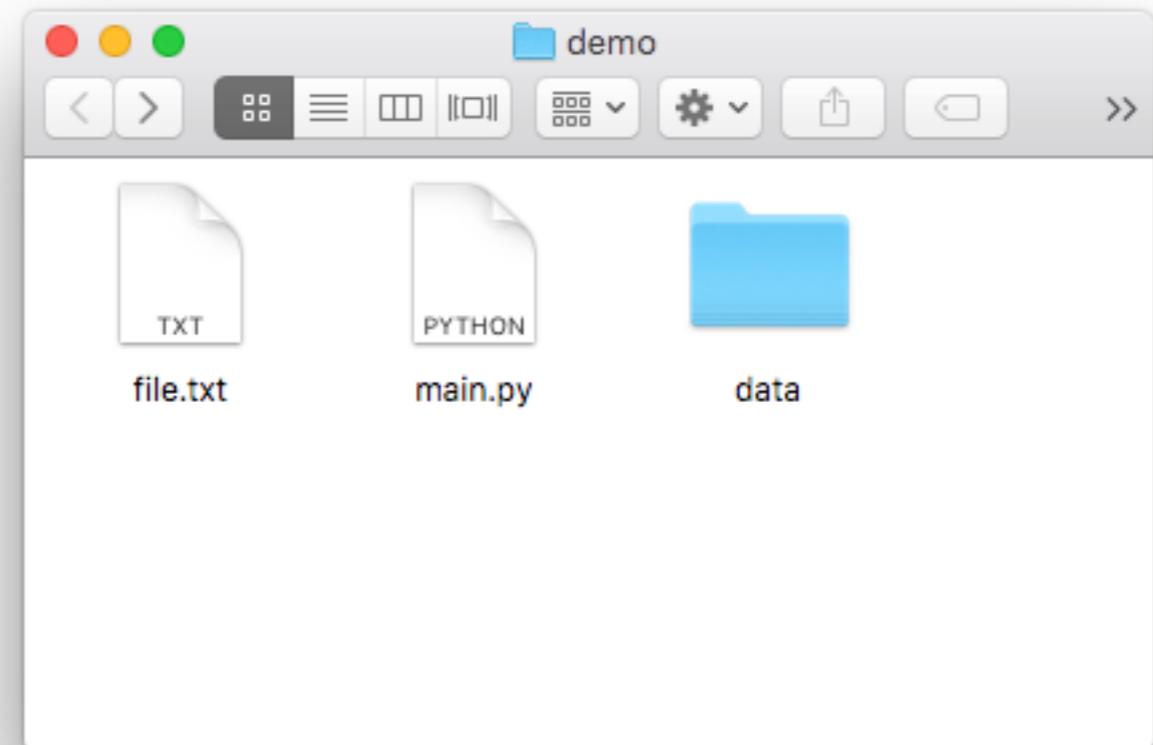

OS Module (Operating System)

Many functions in os and os.path for working w/ files

- os.listdir
- **os.mkdir**
- os.path.exists
- os.path.isfile
- os.path.isdir
- os.path.join

```
>>> import os  
>>> os.mkdir("test")
```

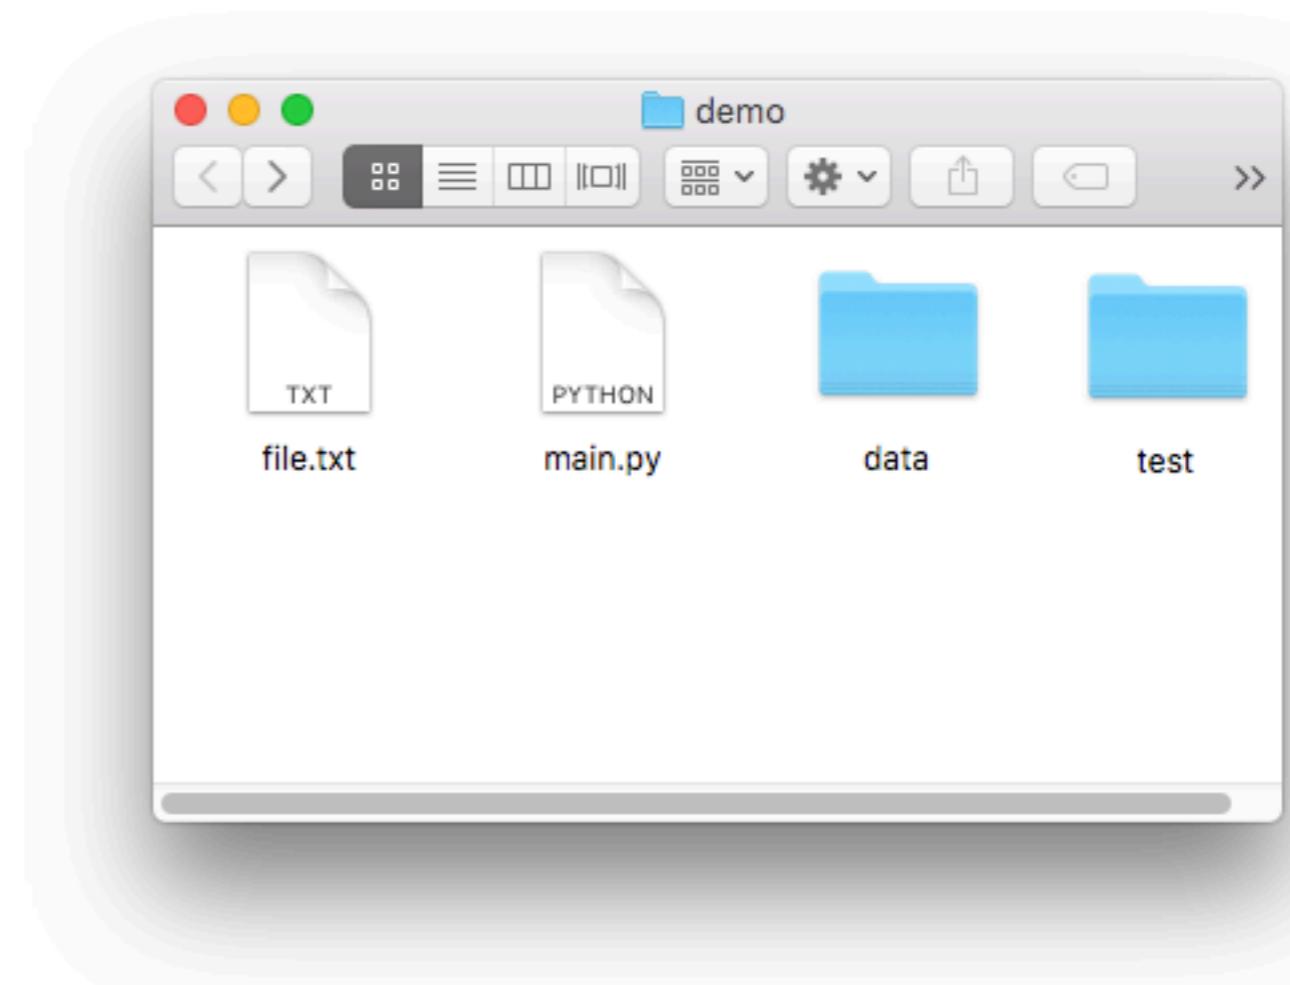

OS Module (Operating System)

Many functions in os and os.path for working w/ files

- os.listdir
- **os.mkdir**
- os.path.exists
- os.path.isfile
- os.path.isdir
- os.path.join

```

- os.listdir
- os.mkdir
- os.path.exists
- os.path.isfile
- os.path.isdir
- **os.path.join**

```
>>> import os  
>>> os.path.join("data", "movies.csv")  
data/movies.csv
```

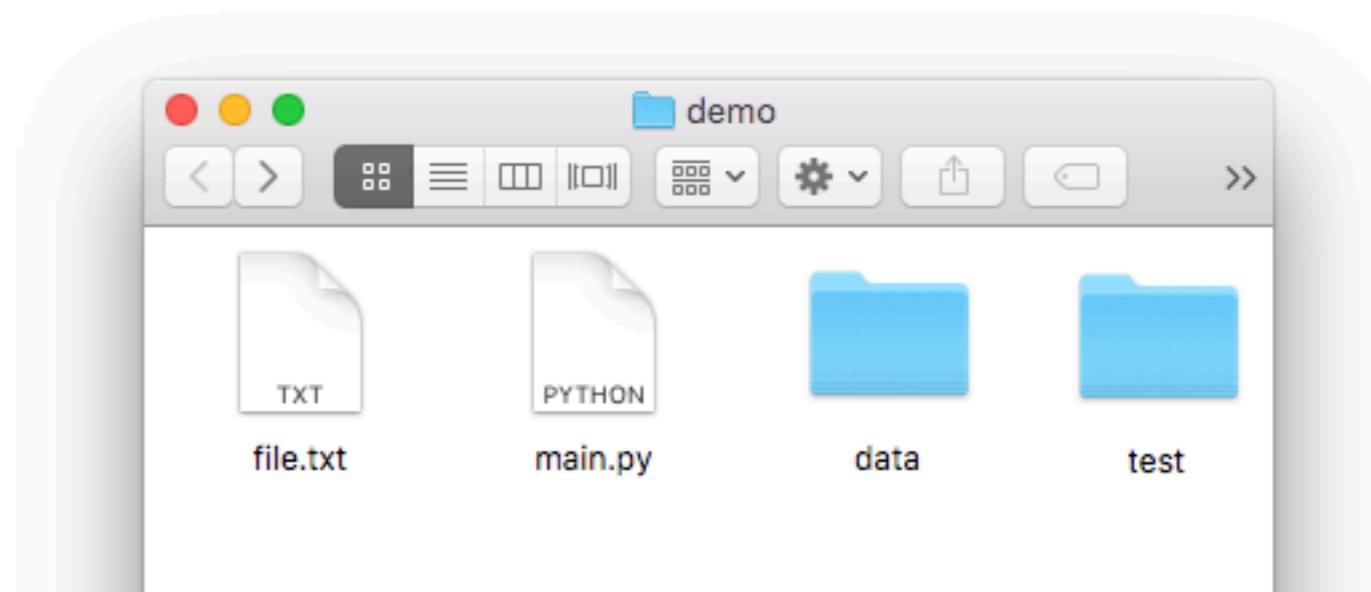

on Mac/Linux

OS Module (Operating System)

Many functions in os and os.path for working w/ files

- os.listdir
- os.mkdir
- os.path.exists
- os.path.isfile
- os.path.isdir
- **os.path.join**

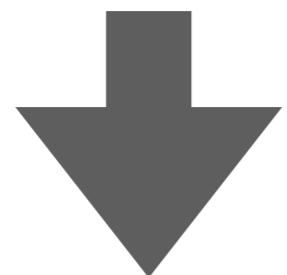

```
>>> import os  
>>> os.path.join("data", "movies.csv")  
data\movies.csv
```

↑
on Windows

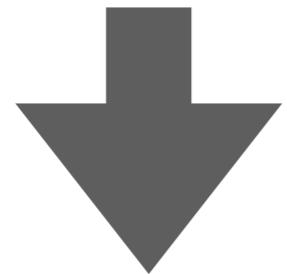

Windows

Your project:

```
path = "\\.join("data", "movies.csv")  
f = open(path)  
...
```

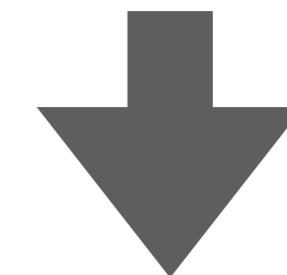

you run test.py

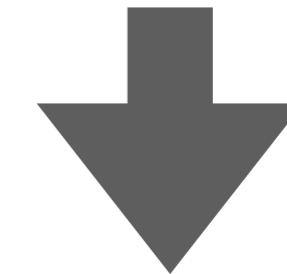

Linux

submit

...

we run test.py

Learning Objectives Today

Basic file interactions

- opening/closing
- reading/writing

OS module

- `listdir`, `mkdir`, `exists`, `isdir`, `isfile`, `join`

File exceptions

Encodings

Exceptions

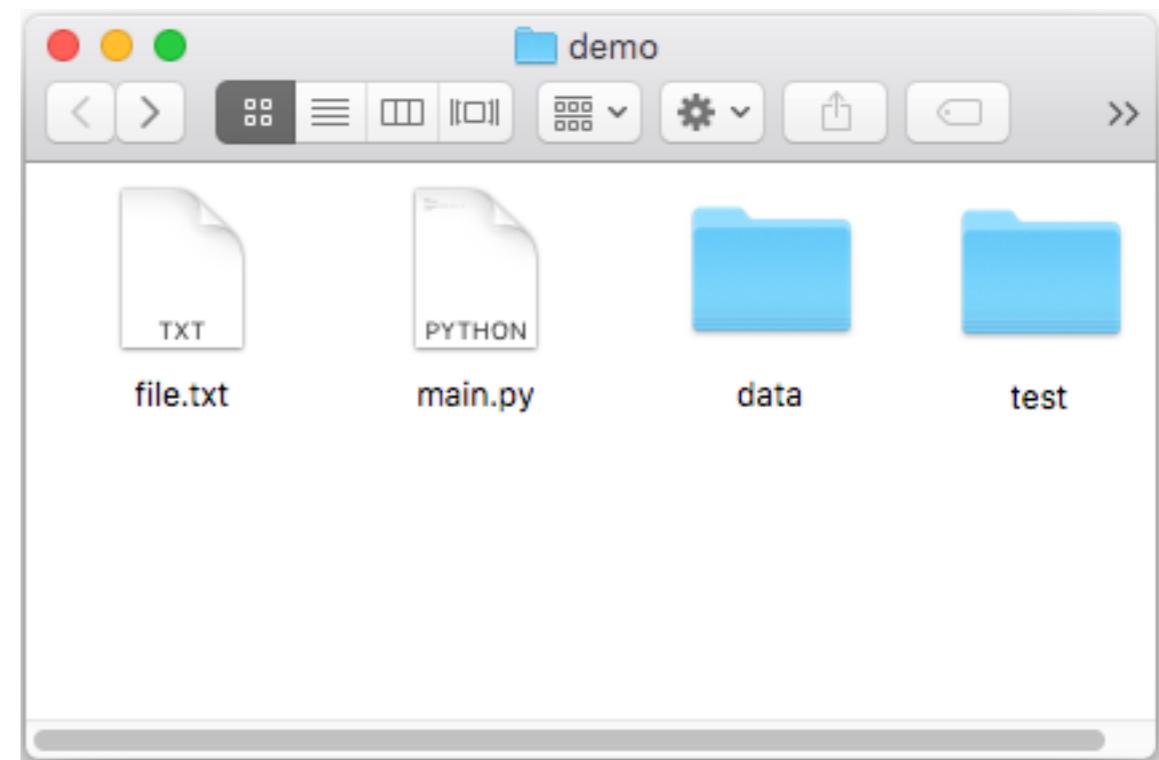

Working with files leads to many exceptions

- missing files
- lacking permissions
- not enough space
- mixing up directories and files
- corrupt formats
- etc, etc

Exceptions

Working with files leads to many exceptions

- missing files
- lacking permissions
- not enough space
- mixing up directories and files
- corrupt formats
- etc, etc

```
import os

os.mkdir('dump')

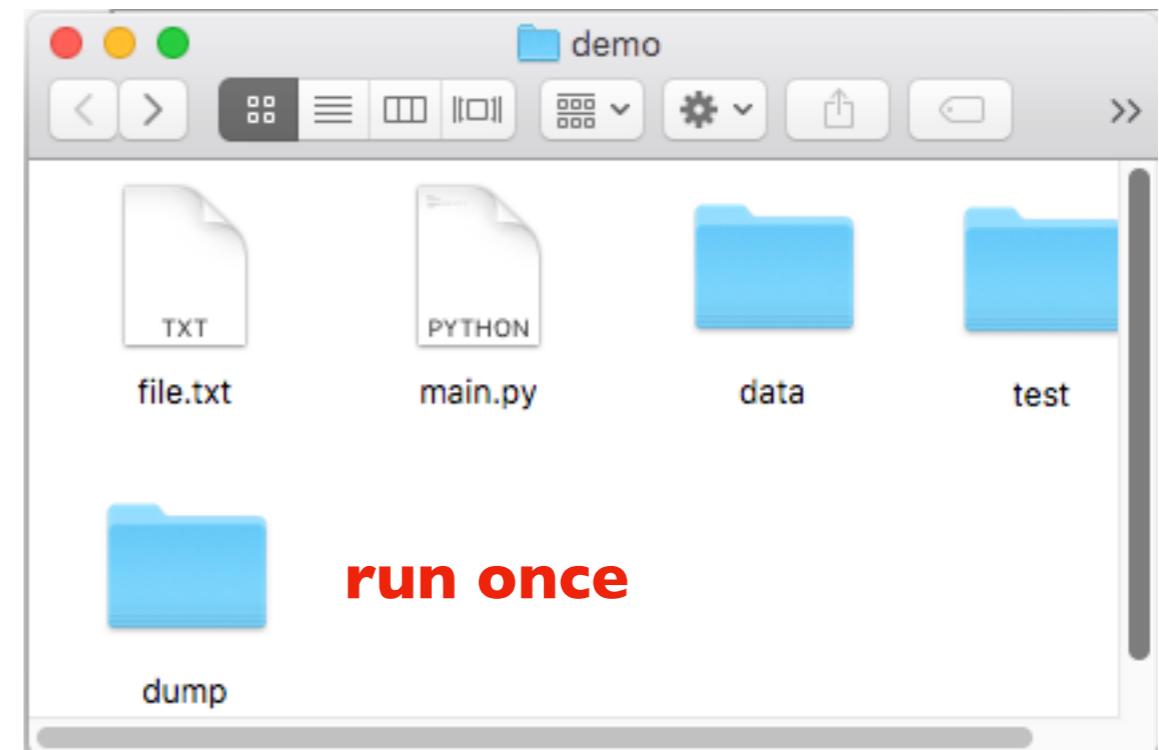

f = open(os.path.join('dump', 'out.txt'), 'w')
f.write('hi')
f.close()
```

Exceptions

Working with files leads to many exceptions

- missing files
- lacking permissions
- not enough space
- mixing up directories and files
- corrupt formats
- etc, etc

```
import os  
  
os.mkdir('dump')  
  
f = open(os.path.join('dump', 'out.txt'), 'w')  
f.write('hi')  
f.close()
```

encoding 2

Encoding Defaults Done Wrong

Mac

```
f = open('example.txt', 'w',  
         encoding='utf-8')  
f.write('baño')  
f.close()
```

example.txt

Windows

```
f = open('example.txt', 'r',  
         encoding='cp1252')  
print(f.read())  
f.close()
```

example.txt

Windows computer prints “baÃ±o” instead of “baño”

Encoding Defaults Done Wrong

Mac

```
f = open('example.txt', 'w',  
          encoding='utf-8')  
f.write('baño')  
f.close()
```

example.txt

Windows

```
f = open('example.txt', 'r',  
          encoding='cp1252')  
print(f.read())  
f.close()
```

example.txt

Takeaway: if you see weird characters printed by your program, it's a good time to learn more about encodings

Coding Demos

Demo I: Score Tracker

Goal: tally up points, and print who is winning

Input:

- Person who just scored

Output:

- Everybody's score

Example:

```
prompt> python point.py alice
```

```
alice: 1
```

```
prompt> python point.py bob
```

```
alice: 1
```

```
bob: 1
```

```
prompt> python point.py alice
```

```
alice: 2
```

```
bob: 1
```

Demo 2: File Finder

Goal: search directories (recursively) for a given file name, then print that file

Input:

- The filename to search for

Output:

- The contents of that file
